PART I

White Paper

Why ArRENCE Exists

Executive Summary

ArRENCE is a multi-expert AI system that does something fundamentally different from the AI products you already know. Instead of cramming everything into one massive model, ArRENCE maintains a library of compact, specialized expert models and a patent-pending routing layer that sends each question to the most qualified specialist.

~6x	ZERO	20+	3
Less Energy Per Query	Cloud Data Logging	Expert Domains	Person Team

ArRENCE is available now at arrenceai.com — free to try, no credit card required.

The Problem We Set Out to Solve

AI is transforming everything. How we work. How we learn. How we make decisions. But the current model of AI has two fundamental problems that nobody in the industry seems interested in fixing — because fixing them isn't profitable.

Problem 1: The Environmental Cost

Cloud AI is an energy hog. A single query to ChatGPT using GPT-4o consumes approximately 0.3 watt-hours of electricity. That might not sound like much until you scale it: billions of queries per day, every day, across the planet. The carbon footprint is staggering and growing.

The AI industry's answer? Build bigger data centers. Burn more energy. The models keep getting larger, the electricity bills keep climbing, and the environmental cost keeps getting pushed onto future generations.

Problem 2: The Privacy Cost

Every major AI company stores your conversations on their servers. Your data trains their models. Your private thoughts, your health questions, your legal concerns, your financial worries — they become raw material for the next model update. Your inner life becomes their product.

This isn't a side effect. It's the business model.

These aren't minor complaints. We are locking in habits RIGHT NOW that will define how AI works for the next 50 years. If we accept that AI must be wasteful and invasive, that's what we'll get. Forever.

We refused to accept that.

Our Solution: The ArRENCE Architecture

ArRENCE is built on a patent-pending modular expert system that rethinks how AI should work from the ground up.

The concept is straightforward: instead of one enormous model that tries to know everything about everything, ArRENCE maintains a library of compact, specialized expert models — each one trained to excel in a specific domain. A math expert. A health expert. A legal expert. A coding expert. And so on.

When you ask a question, a lightweight routing layer analyzes what you need and sends your question to the most qualified specialist. Only ONE expert model is active at any given time.

This single design decision — activating only what's needed — is what makes everything else possible. The energy savings. The speed. The quality.

"It's the difference between turning on every light in a skyscraper to find one document on one desk, versus walking directly to the right office and flipping on that one lamp."

The Environmental Case

This is the section we hope you'll share with someone.

System	Energy Per Query	Relative Cost
ArRENCE	~0.05 Wh	1x (baseline)
ChatGPT (GPT-4o)	~0.3 Wh	6x more energy

Why The Difference Exists

Large monolithic AI models activate their entire neural network for every single question. Ask about the weather, and billions of parameters related to quantum physics, medieval history, and organic chemistry all fire up too. Most of that computation is wasted energy.

ArRENCE activates only the relevant expert. Ask about the weather, and only the weather-capable portion of the system runs. Everything else stays off. That's where the 6x energy savings comes from.

The Scale

If just 1 billion queries per day were served by ArRENCE-class architecture instead of monolithic cloud models, the energy savings would be approximately 250 megawatt-hours per day — enough electricity to power roughly 9,000 American homes. Every single day.

Every question you ask ArRENCE instead of a cloud giant is a vote for a planet-friendly AI future.

(Baseline energy figures drawn from Epoch AI 2025 analysis of LLM inference costs. ArRENCE figures based on real hardware benchmarks of the production system.)

The Privacy Promise

This is the part most people read twice.

✓ **Your conversations stay on YOUR device.** Chat history is stored locally in your web browser for 24 hours. It is not uploaded to cloud servers. It is not stored in any database. After 24 hours, it's gone — automatically and irreversibly.

✓ **We do NOT harvest your data. Period.** No training on your conversations. No selling to advertisers. No anonymous aggregation. No partnerships where your data quietly flows to third parties. Nothing.

✓ **The only exception:** If you voluntarily report a bad answer using the thumbs-down button, you are asked to explicitly acknowledge the submission. Even then — no personal data, no user identity, no conversation context is attached.

✓ **Dark patterns are contractually prohibited.** The company's founding legal documents — the operating agreement that governs Webb Local AI, LLC — explicitly prohibit AI-based psychological manipulation techniques. This is in the foundational legal structure of the company itself.

Your thoughts are yours. Not ours. Not anyone's.

The Team Behind ArRENCE

ArRENCE was built by three people.

Jeremy is the CEO, inventor, and lead engineer. He designed and built the entire ArRENCE system — the architecture, the routing, the inference pipeline, the web interface — while raising three disabled children as a single father.

Chris handles customer satisfaction. Bryan handles operations.

This isn't a sympathy story. It's the reason privacy and environmental responsibility are in the DNA of the product, not bolted on as marketing.

"When you're building the future your kids will live in, you don't cut corners on what matters."

There's no venture capital behind ArRENCE. No corporate backing. No board of directors pushing for growth-at-all-costs. The system was built on consumer hardware in a home lab and now runs from Webb Local AI's own servers.

The core architecture is patent pending.

Three people built this. Three people against trillion-dollar companies. We're not pretending we'll outspend them. We're betting that enough people care about privacy and the planet to choose differently.

Complete User Guide

How to Use ArRENCE

Getting Started

Welcome to ArRENCE AI — a multi-expert AI assistant that automatically routes your questions to specialized AI models. Whether you need help with math, health questions, legal information, wilderness survival, astronomy, or just a conversation, ArRENCE has the right expert ready.

1. Go to arrenceai.com

2. Type your question or message in the text box at the bottom

3. Press Send or hit Enter

4. ArRENCE automatically detects what kind of help you need and routes your question to the right expert

Tip: Use Shift + Enter to add a new line without sending.

Free vs. Paid Accounts

ArRENCE offers a free guest tier so you can try everything out, and a $15/month paid membership that removes limits and unlocks the most powerful features.

Feature	Free Guest	Paid ($15/mo)
Daily chat requests	8 uses/day	**Unlimited**
Weekly token budget	500,000	**2,000,000**
Image generation	3 per day	**Unlimited**
Web search	Rate-limited	**Full access**
Expert model routing	**Yes**	**Yes**
ArENCE-C0D3 Coding	Paid only	**Yes**
Document upload	Paid only	**Yes**
YouTube analysis	**Yes**	**Yes**
Notes & To-Do lists	Paid only	**Yes**
Daily Briefing	Paid only	1 per day
Team Think	Paid only	1 per day
Make My Program	Paid only	5 per week
All visual themes	**Yes**	**Yes**

Your AI Battery

In the top-right area of the chat, you'll see an AI Assistant Battery indicator showing how much of your usage budget remains.

Free accounts: The battery tracks your 8 daily requests. Resets every day.

Paid accounts: The battery tracks your weekly token budget. Resets every Monday.

Chatting with ArRENCE

Just talk naturally. ArRENCE understands plain language — no special commands needed for regular conversation. ArRENCE remembers everything in your current session, so you can ask follow-up questions naturally.

Use the **Clear** button to start a fresh conversation. Use the **Save Chat** button to export the entire conversation as a PDF.

Expert Routing

ArRENCE listens to what you're asking and automatically sends your question to the most relevant specialist. You don't need to pick an expert — just ask and the right one gets it.

Math Expert	Astronomy Expert	Law Expert
Physics & Chemistry	Health & Wellness	Psychology Expert
Finance Expert	Tarot & Dreams	PC Repair
D&D Expert	Biology Expert	Farm & Garden
Business Guru	Wilderness Survival	Doctor
Language Translator	Social Media / X Bot	Web Search
Code Assistant*	Code Auditor*	Python Editor*

* Requires paid account

Getting a Second Opinion (Paid): Paid members can manually select a different expert after receiving a response. Click "Select Expert For Second Opinion" and choose the expert you want — your last question is automatically resent.

ArENCE-C0D3 Coding Experts

ArRENCE includes a suite of dedicated coding AI models grouped under the ArENCE-C0D3 brand — separate, specialized models trained specifically for software development tasks.

- ■ **Code Assistant** — General programming help: writing functions, explaining code, debugging, any language.
- ■ **Code Auditor** — Deep code review mode. Find bugs, security issues, inefficiencies, or suggest improvements.
- ■ **Python Editor** — Specialist for Python optimization, fixing Python-specific bugs, and best-practice refactoring.

Team Think

Team Think is ArRENCE's most powerful analysis mode. Instead of routing your question to a single expert, it consults THREE different specialists simultaneously, then synthesizes their insights into one comprehensive, expert-level answer.

It's ideal for complex, multi-dimensional questions — business planning, major decisions, anything where a single perspective isn't enough.

Daily Briefing

The Daily Briefing gives you a personalized morning summary in a single click. ArRENCE pulls together your pending notes and to-do items, current weather, local news headlines, and top global news stories.

Voice Input & Image Creation

Voice Input: Press and hold the Talk button while speaking, then release. Or use the keyboard shortcut Alt + A.

Image Creation: Just describe what you want to see using natural language. Start with "Please make an image of..." for best results. The more descriptive you are, the better the result — include style, mood, colors, time of day. Free: 3/day. Paid: Unlimited.

Web Search & Weather Reports

Web Search: Use the Web Search toggle or natural language phrases like "Go online and find..." or "Search the web for..." to trigger live web results.

Weather: Ask naturally — "What's the weather in New York?" — and get current conditions, multi-day forecasts (up to 16 days), precipitation chances, and wind data.

Recipes, YouTube & Social Media

Recipes: Connected to a recipe database — find meals, get cooking instructions, or figure out what to make with ingredients on hand.

YouTube Analysis: Paste any YouTube URL into the chat and ask questions about the video content — without watching the whole thing.

Social Media: The X Bot expert creates tweets, threads, viral hooks, and engagement-optimized captions for any platform.

Document Analysis & Notes

Document Analysis (Paid): Upload .txt, .md, .docx, .rtf, .pdf, or images via the paperclip icon or Ctrl+V. Ask any question about the content.

Notes & To-Do (Paid): Just tell ArRENCE what to remember. "Remind me to call the doctor on Thursday" or "Note: the meeting was rescheduled." Tasks auto-label with letters for easy completion and deletion.

Make My Program

A full software generation pipeline. Unlike regular code help that gives snippets, this feature designs, writes, reviews, and packages a complete working program — then gives you a download link.

- ✓ Designs the full program architecture for your use case
- ✓ Writes complete, runnable code
- ✓ Automatically reviews and corrects before delivery
- ✓ Packages everything into a downloadable file (link expires in 45 min)

Paid members: 5 sessions per week, resets Mondays.

Themes & Accessibility

Visual Themes: Classic (default), Light, Dark Mode, 80s Neon, Pink, Gothic, Tech, Deep Sea, Synthwave, USA, Australia, Canada, UK

Dyslexic Font: Toggle OpenDyslexic using the checkbox in the input footer.

Text-to-Speech: Enable "TTS ALL" to have every response read aloud. Individual Speak buttons available per response.

Pro Tips

■ **Be specific.** More context = better answers. Include the language, the error, and the context.

■ **Use follow-ups.** ArRENCE remembers your full conversation — keep digging.

■ **Combine features.** Upload a document, search the web for related info, and use Team Think together.

■ **Input mode toggles:** Web Search, Code Audit All, Small Talk, Analyze Doc — each changes how ArRENCE responds.

Shortcut	Action
Enter	Send message
Shift + Enter	New line without sending
Alt + A (hold)	Voice input
Ctrl + V	Paste image/screenshot

PART III

Closing

The Invitation

Try it free at **arrenceai.com** — no credit card required.

8 free queries per day. Full expert access (except coding). Image generation. Web search. Voice input. Every theme. Every accessibility feature.

If it makes a difference in your life, **$15/month** unlocks everything: unlimited queries, coding experts, document analysis, notes, Team Think, Daily Briefing, Make My Program, and more.

We built ArRENCE because we believe AI can be powerful without being wasteful, and useful without being invasive. Every query you send through ArRENCE instead of a cloud giant is a vote for a different kind of future — one where your privacy belongs to you and the planet doesn't pay the price for progress.

*"The age of AI is here. You deserve to grow into it safely and with autonomy.
We're here when you're ready."*
