

FOR IMMEDIATE RELEASE

ArRence AI Launches Daily Briefing: The First AI Assistant That Knows Your Tasks, Your Weather, and Your World — Before You Ask

One button. One screen. Every morning detail that used to take six apps and twenty minutes.

McAlester, OK — March 13, 2026 — Webb Local AI, LLC

ArRence AI, the privacy-first AI platform, today announced **Daily Briefing** — a first-of-its-kind feature that combines a user's personal tasks and notes with localized weather, local news, and AI-synthesized global headlines into a single, on-demand morning report generated entirely on-device.

Unlike conventional AI chatbots that wait for questions, Daily Briefing anticipates what users need to start their day. One tap delivers a personalized rundown that no single app on the market currently provides.

The Problem Nobody Talks About

The average knowledge worker checks seven different apps before their first meeting of the day: a to-do list, a weather app, two or three news sources, a calendar, and a notes app. Each one demands attention. Each one fragments focus. By the time they sit down to work, the cognitive cost has already been paid.

"We kept hearing the same thing from users. They weren't asking for another chatbot. They were asking, 'Why can't one thing just tell me what I need to know?' Daily Briefing is that thing."

— **Jeremy Webb, Founder, ArRence AI**

How It Works

When a paid subscriber taps the **Daily Briefing** button, ArRence's multi-model engine fires four parallel queries simultaneously:

Your Tasks & Notes

Pulls from the user's saved to-do items and pinned notes, distinguishing between actionable tasks and reference information.

Local Weather

Auto-detects the user's location and delivers a forecast without requiring a separate search.

Local News

Surfaces region-specific headlines relevant to the user's area.

Global News Synthesis

Queries three independent categories (geopolitics, economics, and global events), then uses a dedicated AI model to synthesize and deduplicate results into exactly five verified bullets — each formatted as *what happened* and *why it matters*.

The result renders as a clean, theme-aware card directly in the chat interface — no redirects, no new tabs, no app-switching.

What Makes It Different

- **It's personal, not generic.**
Daily Briefing doesn't deliver the same feed to every user. Your tasks, your location, your context. Two users in different cities pressing the same button get entirely different briefings.
- **It's synthesized, not aggregated.**
Global news isn't a list of links. ArRence's AI reads across multiple source categories, eliminates duplicates, filters unverified claims, and produces a concise five-point summary a human would actually read.
- **It's private.**
Every piece of the briefing is generated on ArRence's own infrastructure. No data is sent to third-party AI providers. User location is only referenced when contextually relevant — weather and local news queries — and never stored externally.
- **It replaces a routine, not just a tool.**
The feature isn't competing with a single app. It's replacing the habit loop of opening six apps in sequence every morning.

Availability & Pricing

\$15 /month

Less than the combined cost of most premium news, weather, and productivity subscriptions

Daily Briefing is available **now** for all ArRence AI paid subscribers. Paid users receive one briefing per day. **VIP members** receive unlimited access.

Free-tier users can experience the full ArRence AI chat platform and upgrade when ready.

About ArRence AI

ArRence AI is a multi-model AI platform that routes every question to a domain-specific expert model — from legal analysis to chemistry to creative writing — all running locally on consumer hardware. With built-in document search, vision capabilities, task management, and now Daily Briefing, ArRence is designed for people who want a single, private, intelligent assistant that actually understands what they need.
